

Weld-Pro™ Saddle Cam Assembly System

Weld-Pro™ Custom Assembly Kits include all the components needed (less tubing) to assemble factory quality lockrods. Weld-Pro kits are universal so each may be assembled with the lever to the left or right.

- ▼ Create custom lengths and lever mount locations.
- ▼ Universal handle and mount is pre-assembled with stainless steel rivet.
- ▼ Universal keepers are symmetrical with square and flat surfaces for accurate end-frame placement and fixturing.
- ▼ Long reach cam design provides opening leverage to free frozen or stuck doors.
- ▼ Cams and keepers are investment castings for strength and consistent fit.
- ▼ Anti-seize bearings snap together for easy assembly and smooth operation (Acetal components prevent galling and eliminate the need for lubrication).

Weld-on Kit

P51183 (zinc finish),
P51185 (HDG finish)

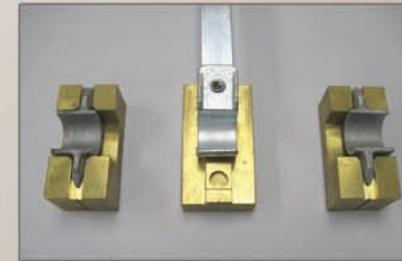

Bolt-on Kit

P51193 (zinc finish),
P51195 (HDG finish)

Consider these optional products as well:

Fixture Set (P51200)

A precision welding fixture set designed exclusively for use with Weld-Pro Custom Lockrod Assembly Kits. The fixtures allow for the construction of a fully assembled lockrod in minutes with minimal welding (only six straight 1" welds assemble each lockrod).

- ▼ Fixtures are brass investment castings that allow easy welding and accurate lockrod timing.
- ▼ Compact 3-piece fixture set may be used on any flat, straight surface.

WELD-PRO Custom Tubing (P50005A)

Powerbrace heavy-duty, high-yield, pre-galvanized tubing is 57-83% stronger than most standard supply house pipe. 120-inch lengths (sold in bundles of ten).
